

Does your service provider offer a solution that meets your business needs?

NetWolves has forged strong relationships with leading facility providers to offer the best carrier and technology agnostic solutions at a lower cost to meet your business needs in nearly any global location.

## STAY CONNECTED WITH THE LATEST DATA TECHNOLOGIES

- **DMVPN** service provides a scalable and centralized solution for easier implementation and management of secure communication between branch offices, mobile workers, and telecommuters.
- **Managed VPN** provides a secure connection between offices and remote workers, and eliminates the frustration associated with using special VPN technology to access your business data and applications.
- **VPLS** service offers all the advantages of high bandwidth and reliability with Ethernet-based any-to-any communication over IP/MPLS networks.

## MORE CHOICES TO FIT ANY NEED

- **Private line** service offers unparalleled end-to-end performance between offices, and makes a great choice for handling large volumes of data or integrating voice, video, and data.
- **MPLS** service provides solid performance, lower total cost of ownership, and flexibility to accommodate new technologies as your business needs change.
- **Internet** services include Ethernet, Broadband, and Satellite. With Ethernet, you get all the benefits you've come to expect from a proven and stable technology, with scalability that won't cripple your bottom line. Broadband services are readily available in most metropolitan areas and include DSL and cable. When considering redundant connectivity to complement another technology, satellite service makes a good choice.
- **Wireless and Fixed** services offer your business convenience and mobility, and provide a cost-effective alternative to leasing fiber or installing cables between office locations.

# MAKE THE RIGHT CALL WITH OUR VOICE AND CONFERENCING SERVICES

- **Dedicated** service offers the premier quality and technological advantages of all-digital, fiber-optic transmission. Traditional inbound/outbound switched services are also available.
- **Hosted PBX and SIP** solutions offer a wide range of features that most traditional systems lack. Extensions are added with ease, and unlimited calling plans are available at a very affordable rate.
- **Audio and web** conferencing solutions are perfectly tailored to meet nearly any business communications need, from small impromptu meetings to large scale events, and offer ease of use and reliability at an affordable cost.
- **Redundancy** was never easier thanks to the strong relationships NetWolves has forged with many leading service providers.

## KEY FEATURES

- NetWolves is an FCC-licensed and tariffed carrier in all 50 states, offering multiple services on a single invoice. Global data services are also available.
- NetWolves offers carrier grade private and public data backbone access and transport solutions through relationships with over 150 service providers, including AT&T, Verizon, Sprint, Comcast, Time Warner, CenturyLink, and others.
- NetWolves utilizes several different technologies, including T1, OC3, private lines, Ethernet, DSL/cable broadband, satellite, and wireless services.
- NetWolves can provide creative solutions for managed primary and redundant networks utilizing MPLS, DMVPN, VPLS, cloud services, managed VPN, and others.
